

SEW-EURODRIVE in Indonesia

Our drive solutions strengthen Indonesia's global competitiveness

Drive technology from SEW-EURODRIVE takes flexibility to a whole new level. Our diverse product portfolio ranges from gearmotors, gear units, motors, components for decentralized installation, and electronically controlled drives to mechanical variable-speed gearmotors, as well as drive solutions that involve a great deal of engineering – and the proven modular system ensures that all the components are fully compatible.

SEW-EURODRIVE has been setting standards in drive engineering for 90 years and our success is built on innovation, consistent research, and development. Based on the principles of Industry 4.0, SEW-EURODRIVE has taken drive technology and automation solutions to the next level. Since 2013, we have been operating a production site in Germany under real conditions that are aligned with the principles of Industry 4.0. We will support the initiative "Making Indonesia 4.0" by introducing our MAXOLUTION® factory automation concepts with the help of our Indonesian representative office and our sales/service partners.
